Apple Push Notifications (APNs)

Apple Push Notifications (APNs) is a service provided by Apple that allows you to send push notifications to your users. It is a part of the Cerberus Enterprise Apple Push Notification service (APNs) framework.

To get started with APNs, you need to create an Apple ID and an Apple Push Certificate. The process involves several steps, including generating a CSR and signing it with your private key.

1. Step 1: CSR Generation

The first step is to generate a Certificate Signing Request (CSR). This is done using the Cerberus Enterprise Vendor-Signed Certificate Signing Request (CSR) tool.

2. Step 2: Apple Push Certificate Generation

- Apple ID: Apple Push Certificates Portal
- "Apple Push Certificate" tool
- 1. Generate CSR using Cerberus Enterprise CSR tool
- 2. Sign the CSR with your private key

For more information, visit: <https://identity.apple.com/>

3. Step 3: APNs Key Generation

Apple provides a tool to generate an APNs key. This key is used to sign the APNs certificates. The Cerberus Enterprise tool also provides a way to generate the key.

APNs keys are generated using the Cerberus Enterprise tool. The process involves generating a key pair and signing the certificate with the private key.
