# Compliance rules

If a device or work profile fails to comply with any of the policy settings listed below, Android Device Policy immediately blocks usage of the device or work profile by default:

- **Password requirements**
- **Encryption policy**
- **Keyguard disabled**
- **Permitted input methods**
- **Permitted accessibility services**

If the device or work profile remains non-compliant after 10 days, Android Device Policy will factory-reset the device or delete the work profile.

In this section, you can override the default compliance enforcement rules or add new ones.

## Rules

List of rules that define the behavior when a particular policy cannot be applied to a device.

Use **Add rule** to create a new rule. Each rule card can be removed using the delete action.

### Setting name

The top-level policy to enforce. For example, **Applications** or **Password requirements**.

**Required.** The value must match a supported top-level policy name; otherwise the field is marked as invalid.

### Block after days

Number of days the policy is non-compliant before the device or work profile is blocked. To block access immediately, set to 0. **Block after days** must be less than **Wipe after days**. Only applicable to devices that are company-owned.

Allowed range: 0–300.

### Block scope

Specifies the scope of block action. Only applicable to devices that are company-owned.

Default (new rule): **Work profile**.

**Work profile**: Block action is only applied to apps in the work profile. Apps in the personal profile are unaffected.

**Entire device**: Block action is applied to the entire device, including apps in the personal profile.

## Wipe after days

Number of days the policy is non-compliant before the device or work profile is wiped.
**Wipe after days** must be greater than **Block after days**. Only applicable to devices that are company-owned.

**Required.** Default (new rule): **1**.

Allowed range: 1–300.

## Preserve factory-reset protection

Whether the factory-reset protection data is preserved on the device. This setting doesn’t apply to work profiles.

Default (new rule): enabled.
