Personal usage

When provisioning a company-owned device for work and personal use, you can specify some rules to limit how the user can operate the device for personale usage, outside the work profile.

> This section only apply to company-owned devices with work profile. They will have no effect on fully manged or personally-owned devices.

1. Camera disabled

Whether camera is disabled.

2. Screen capture disabled

Whether screen capture is disabled.

3. Max days with work off

Controls how long the work profile can stay off.

4. Bluetooth sharing

Controls whether bluetooth sharing is allowed in the personal profile of a company-owned device with a work profile.

5. Private space

Controls whether a private space is allowed on the device.

6. Play Store mode

This mode controls which apps are allowed or blocked to the user in the personal profile's Play Store.

> **Blocklist (default)**: All apps are available and any app that should not be on the device should be explicitly marked as **Blocked** in the **Applications** section.
>
> **Allowlist**: Only apps explicitly specified in the **Applications** section with **Install type** set to **Available** are allowed to be installed in the personal profile.

7. Applications

List of applications that must be allowed or blocked on the personal profile. The behavior of the list's content depends on the value set on **Play Store mode**.

To add a new app from Play Store, click on the **+** icon.

7.1. Install type

Types of installation behaviors a personal profile application can have.

> **Blocked**: The app is blocked and can't be installed in the personal profile.
>
> **Available**: The app is available to install in the personal profile.

8. Blocked account types

Account types that can't be managed by the user. This option prevent device users from adding unapproved accounts on their personal profile.
