Status reporting

In this section, you can configure which data should be retrieved from the device. The status data can be viewed in the **Device status** dashboard page.

Application reports

Whether app reports are enabled. (Information reported about an installed app.)

> This option is required by the system (for companion-app integration) and is always enabled; it can't be disabled.

Include removed apps

Whether removed apps are included in application reports.

Device settings

Whether device settings reporting is enabled. (Information about security related device settings on device.)

Software info

Whether software info reporting is enabled. (Information about device software.)

Memory info

Whether memory reporting is enabled. (An event related to memory and storage measurements.)

Network info

Whether network info reporting is enabled. (Device network info.)

Display info

Whether displays reporting is enabled. Report data is not available for personally-owned devices with work profiles. (Device display information.)

Power management events

Whether power management event reporting is enabled. Report data is not available for personally-owned devices with work profiles.

Hardware status

Whether hardware status reporting is enabled. Report data is not available for personally-owned devices with work profiles.

System properties

Whether system properties reporting is enabled.

Common Criteria Mode

Whether Common Criteria Mode reporting is enabled.
